Problem 1

1. (2%) Print the network architecture of your model.

```

```

- 2. (2%) Report accuracy of model on the validation set. 0.896(2240/2500, 90%)
- 3. (6%) Visualize the classification result on validation set by implementing t-SNE on output features of the second last layer. Briefly explain your result of the tSNE visualization.

From the graph, we can see that most of them can be distinguished. Yet, some of them are overlapped. There are two possibilities, the first is that the model is not good enough, the other is that 2D visualization may lose some dimensional information. As the accuracy on the val set is almost 90%, and 2D is much smaller than 50D, I tend to believe the case is the latter.

Problem2

1. (5%) Print the network architecture of your VGG16-FCN32s model.

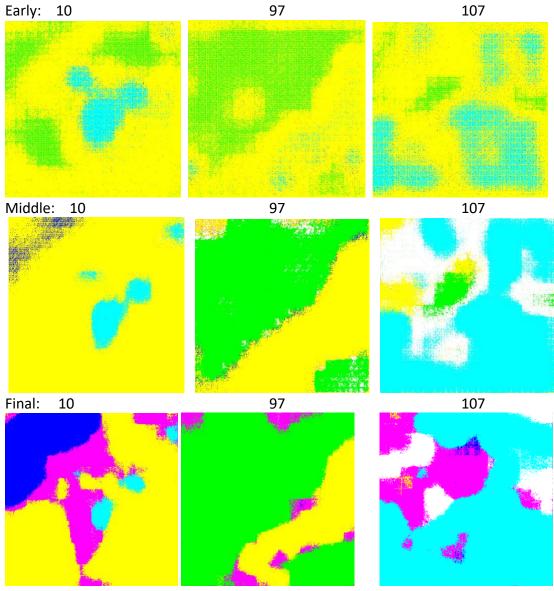

```
